

EAM DataManagement Data import and export using MS Excel

Fully integrated into IBM Maximo and MAS Manage

Data preparation and data imports are costly, time-consuming and can be a major bottleneck during a system rollout. Once operational, ongoing data management requirements are among the main challenges for the Maximo administrator.

System Message

Dataimport Summary:
 New records: 1285
 Modified records: 150
 Skipped records: 0
 Deleted main objects: 0
 Deleted child objects: 0
 Records with errors: 0

Focuses on Business users

The EAM DataManagement is the leading global tool to support all data administration tasks for IBM Maximo, MAS Manage and IBM Control Desk. Across a wide range of industries, first and foremost power users throughout Europe have worked with this tool for more than 10 years. Two out of the three leading automotive manufacturers in Germany rely heavily on the tool to deliver the administrative capabilities for their operational success.

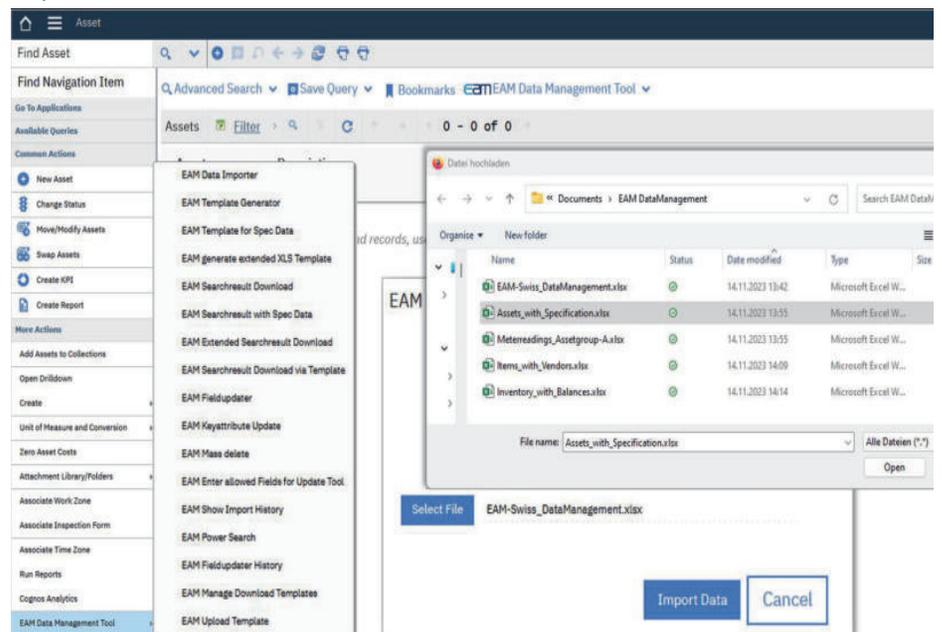

Audit proven

The EAM DataManagement simplifies data revision, import and export activities through the use of Microsoft Excel. Special import and export functions present normal object data and specification data in one line in an Excel sheet. With integrated template management, the tool can be used to set up and manage Excel reports and the integrated transaction history allows the audit of all relevant data management actions. View and reuse all of the used import files.

Integrated

Fully integrated in any Maximo standard and custom application, supports add-ons and industry solution, enforcing the Maximo security framework. EAM DataManagement supports multi language Maximo implementations and recognizes local language and format settings based on the client/server configuration.

The tool is powered by an engine developed and maintained by RODIAS GmbH.

EAM DataManagement

ADVANTAGES AND ADDED VALUE

Save an average of 40% in system rollout and operational cost.
Allows simple import of any Excel data source.
Data import process requires no typing.
Data exports via standardized Excel templates.

Improves data quality.
Simplifies data exchange with other systems.
Handles large volume of data.
Fully integrated within Maximo:
Enforces Maximo business rules and security policies.

TECHNICAL SPECIFICATIONS

Maximo Version: EAM DataManagement is available for Maximo 7.6.1 and Maximo Application Suite 8.x
Compatibility: No impairment of the release capability
